

## 2008-01-17 Pbar Department Meeting

Thursday, January 17, 2008  
10:00 AM

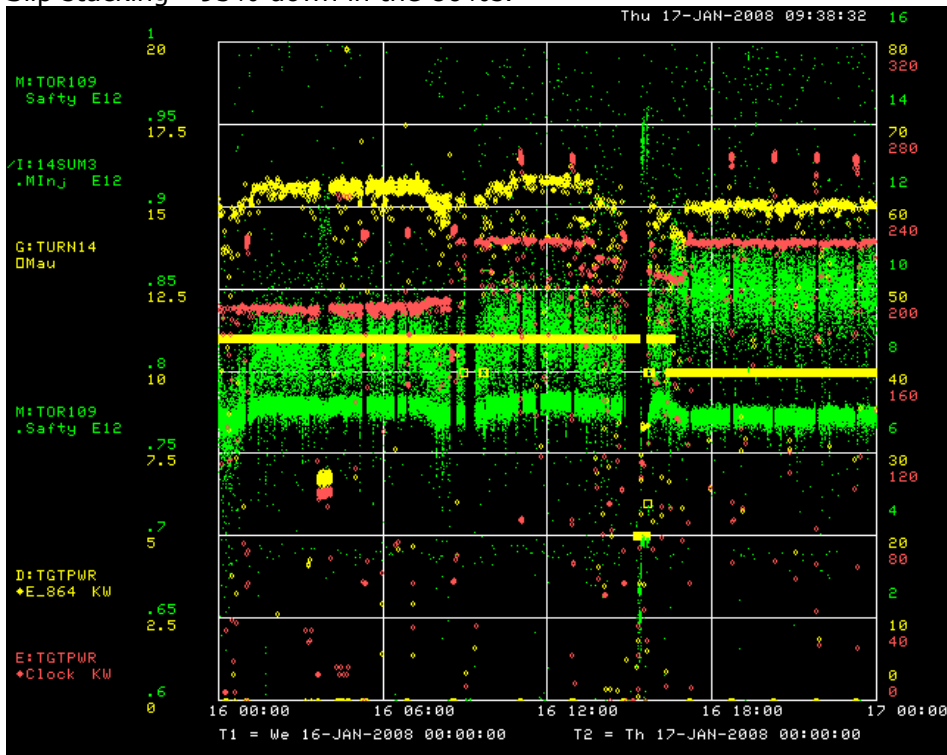

- 
- 71KW, now 61KW
- We are down...
- Lots of stacking above 24mA/hr despite this.

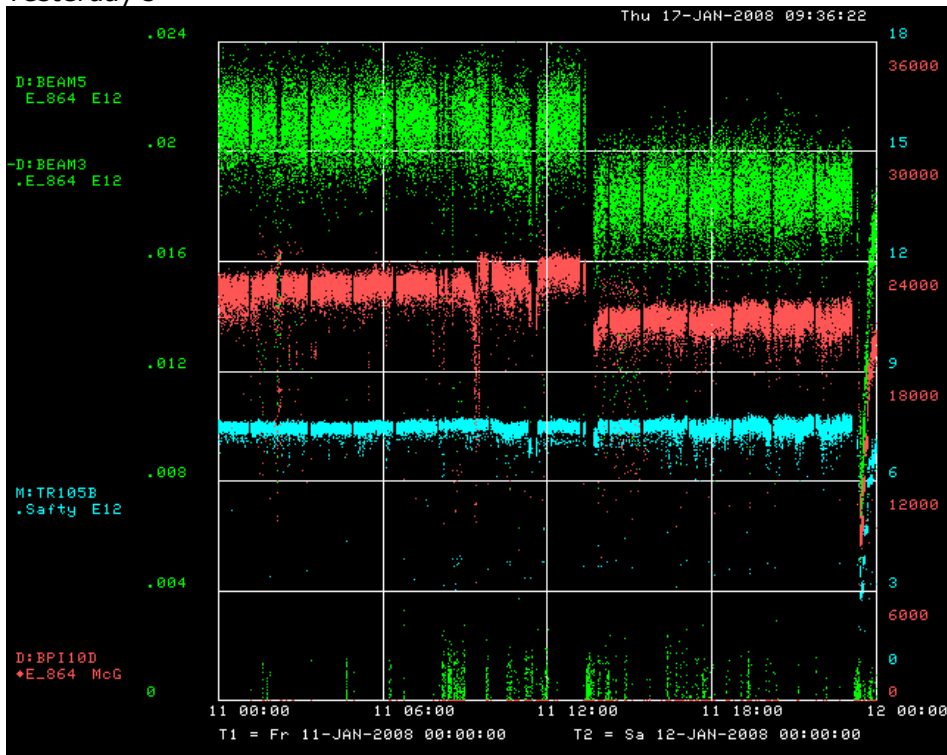

- 
- Slip stacking - 95% down in the 80%.

- Slip stacking - 95% down in the 80%.

- Yesterday's

- Debuncher tunes - put back.
  - S
- Number of particles...20% change in production eff, but didn't see in D/A...
  - 4.5 to 5 e12, production 25+
- Debuncher cooling
  - Stand ready.
- Flusher
  - Tried it again today
  - So far, not much benefit on smaller stack
  - Running it now.
- 8 GeV optics

- Looks like it was a little worse, so put the change back.
- 2847mA stacked - best week....Monday mid to mid
- Tony moved the target to a new position
  - Elapsed time was 16 days, but we werent stacking
  - Without sweeping 9-10 days on first position, with sweeping 50% more.
